

project to have four smaller Turgo-type turbine-generators in lieu of the approved two Francis-type turbine-generators. The design change would decrease the project capacity from 1.8 megawatts (MW) to 1.4 MW and decreases the hydraulic capacity from 180 cubic feet per second (cfs) to 150 cfs. The licensee states that this redesign will better align with the existing features of the Flannagan Dam and produce more energy on a yearly basis than the previous design. The licensee states that it is not proposing changes to any other aspects of the project and that the environmental impact of the project will not change from previously analyzed.

k. *Description of Request:* Allete, Inc (licensee) is proposing to amend its project boundary at three of the project's reservoirs (*i.e.*, Island Lake Reservoir, Fish Lake Reservoir, and Whiteface Reservoir) to more accurately reflect the lands needed for project purposes. The licensee would remove approximately 191 acres of land around the reservoirs that are currently leased to individuals for private, residential use, while preserving an upland buffer area around the reservoirs. Additionally, the licensee would add 469 acres of land around the three reservoirs to be managed as Natural Character Areas for scenic and environmental protection uses. The proposed project boundary adjustment would result in a net increase of 423 acres of project lands including the removal of residential lands, addition of environmental protection lands, as well as other additions to reflect actual acreages of islands and recreation areas inside the project boundary.

l. *Locations of the Application:* In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://www.ferc.gov>) using the "eLibrary" link.
